ABSTRACTED-PUB-NO: JP10216294A

BASIC-ABSTRACT: The system has a main computer (5) which
consists of a non-

volatile memory reader for reading the hall topographical map from the memory.

The read data is transmitted to a portable terminal from which output is

received by a data forwarding unit. The data of each player received from portable terminal through data forwarding unit is accumulated.

A calculation unit calculates gross and net ranking for each player based on

accumulation result to decide ranking of the golf. A display unit displays the

calculation result. A display device (8) provided in the portable terminal

displays information regarding golf course, topographical map of each hall,

characters and figures. A display controller (7) makes the display device to

display the topographical map and golf course information based on the data

forwarded from the main computer.

ADVANTAGE - Enables accumulating data quickly after game completion. Improves

pleasure of golf game. Reduces burden on score accumulation person.

ABSTRACT:

PURPOSE: To provide a means by which each golfer can know directly hole layouts

and the positions of cups on the day to make the game proceed successfully in a golf course.

CONSTITUTION: This golf data display 1 is made by incorporating a memory which stores data including the layouts of each hole, hole numbers, and the positions of cups in putting greens, a liquid crystal display 3 which displays data

stored in the memory for each hole, and an entry means to select a hole to be displayed on the display into the main body of a portable board. A time scale 5 which indicates time consumed from the start to a specific point of time, if attached, will make the display more convenient.
